

Lock it System

The removable carrier system

The design of the modern motorcycles makes the attachment of a luggage system difficult. The shape of the bike is not consistent with the appropriate appearance of a rack.

Many motorcyclists nevertheless do not want to be without luggage on their long tour. The luggage system must therefore be easy to install and remove.

Our solution to this problem was the development of the Lock it System.

After the assembly the rack can be removed and refitted easily in a few seconds by using the Lock it System screws.

The fixing points are mounted discreetly on the motorcycle.

The indicators can remain in their original position.
